we study brakke's motion of varifolds by mean curvature in the special case that the initial surface is an integral cycle giving a new existence proof by mean of elliptic regularization under a uniqueness hypothesis we obtain a weakly continuous family of currents solving brakke's motion these currents remain within the corresponding level set motion by mean curvature as defined by Evans Spruck and Chen Giga Goto now let $\partial \Omega$ be the reduced boundary of a bounded set of finite perimeter in \mathbb{R}^n if the level set motion of the support of $\partial \Omega$ does not develop positive Lebesgue measure then there corresponds a unique integral n -current μ $\partial \Omega$ partial derivative boundary degree of a polynomial

theory of applied robotics kinematics dynamics and control presents detailed robotics concepts at a theoretical practical level concentrating on their practical use related theorems and formal proofs are provided as are real life applications this new edition is completely revised and includes updated and expanded example sets and problems and new materials this textbook is designed for undergraduate or first year graduate programs in mechanical systems and industrial engineering practicing engineers researchers and related professionals will appreciate the book s user friendly presentation of a wealth of robotics topics most notably in 3d kinematics and dynamics of manipulator robots

this book is open access under a cc by 4 0 license this easy to read book introduces the basics of solving partial differential equations by means of finite difference methods unlike many of the traditional academic works on the topic this book was written for practitioners accordingly it especially addresses the construction of finite difference schemes formulation and implementation of algorithms verification of implementations analyses of physical behavior as implied by the numerical solutions and how to apply the methods and software to solve problems in the fields of physics and biology
